

CSIT314 Group Project 2nd Submission

Requirement Change

In addition to the original project specification, the following feature enhancements are required:

1. Candidate Profile Enhancement

The candidate profile must be extended to include:

- Work Experience
- Skills
- Preferred Working Mode (Remote / On-site / Hybrid)
- Preferred Location

Objective: Improve the matching accuracy between candidate profiles and employer job descriptions (JD).

2. New Membership Feature

Both companies and candidates **MUST** have the membership options. That is, the job/candidate's recommendation mechanism must be modified as follows:

- **Membership users:** Unlimited number of recommended jobs for candidates and unlimited recommended candidates for companies
- **Non-membership users:** Maximum of **Top 10** recommended jobs/candidates [that is the same as before]

3. Searching Function

Searching function needs to **consider all candidate and company's profile**

- **Keywords:** Basic keyword matching where users input one or more terms to retrieve relevant results.
 - Example: searching "software engineer" returns jobs containing these keywords.
- **Filter:** Users refine results using predefined conditions such as location, salary range, or job type.
 - Example: filtering jobs by "Sydney" and "Full-time" only shows matching listings.
- **Keywords + filter:** Combines keyword search with filters for more precise results.

- Example: searching "data analyst" and filtering by "Remote" and "Entry-level".
 - Fuzzy search: Handles typos or approximate matches to improve search robustness.
 - Example: searching "software engineer" or "programmer" or "coder" still returns "software engineer" jobs.
-
